

HWCI NCAA POOL: ANNUAL STATISTICS (1995-2002)

Here are the all-time stats for the HWCI NCAA Pool. In 8 years, there have been 292 total entries from 118 different people. First place has averaged \$187. In 2002, the 3rd Place prize (\$130) surpassed 1995's total pot (\$120). 4th Place won as much as 1st Place did in 1995. At least one #1 seed has made it to the final since 1995 and only once did two #1 seeds make it. #1 seeds have won all but the 1997 and 1998 tournaments.

A total of 10,984 wins have been picked, a 59.7% winning percentage. In all but two years did the entries average at least 100 points. In 2000, the 36 entries won an incredible average of 26.2 of the 32 1st Round games (81.9%). In 1999, the 36 entries had a whopping 65.3% winning percentage of picking the two teams in the Final.

NOTES: Entry vs Person. A new entry could be a person entering a second (or third) entry in the pool for the first time. # NEW ENTRIES/YR- Number of brand new people or 2nd/3rd entries; # YEARS/ENTRY- Number of people who have participated in the pool 1-8 times (e.g., there are 74 entries that have participated just once); RETURN ENTRIES- Number of entries that have participated in a prior pool.
